# AIR STRATOS

**AIR STRATOS** is a high performance all-terrain helmet for fast, light gravel and adventure riding. This robust and lightweight model has been designed from the ground up to keep the weight low and the comfort high.

Double in-mould shell with 15 vents for strength and ventilation. AirFit-System provides the best comfort and non allergenic treated pads keep your head dry.

A strong construction made for thousands of kilometers on bikepacking expeditions, rough roads and single tracks.

Ready for the perfect mix of racing and adventure? With Air Stratos you can live your adventures everywhere, surrounded by wonderful scenery, riding on your bike with style, fun and in total safety!

RENEWING THE LIGHTEST

NEW

**RENEWING THE  
LIGHTEST**

# REVEALING THE SECRETS OF LIGHTNESS

Our secret of lightness is a complex achievement: it is a combination of raw material selection, deep and wide know-how of the pre-expansion and in-mould processes. We have been not just pioneers of the in-mould process but can still count on a wide knowledge and ongoing developments for a wide range of products and technologies in widespread sectors from safety, to building, packaging, insulation, etc. The perfect balance between lightness and safety, density and shock absorption is also intrinsic in the right shape with the best interplay of solids and voids.

# ULTRALIGHT EVO

## THE SECRET OF LIGHTNESS

Ultralight+ has been one of the favourite helmets in the Limar range.

LIMAR has been among the first companies to heavily invest in technologies to develop safer and lighter products, allowing great performances and offering the market the widest range of super lightest helmets for each category of use.

Ultralight Evo is the renewed design of our record holder.

the double in moulded version gives lightness a new modern look and increased quality.

## SO MANY QUALITIES IN SUCH A LITTLE WEIGHT

Ultralight+ combines Limar record of lightness with an excellent design, aggressive and aerodynamic at the same time, with 22 air channels, enriched by a back spoiler.

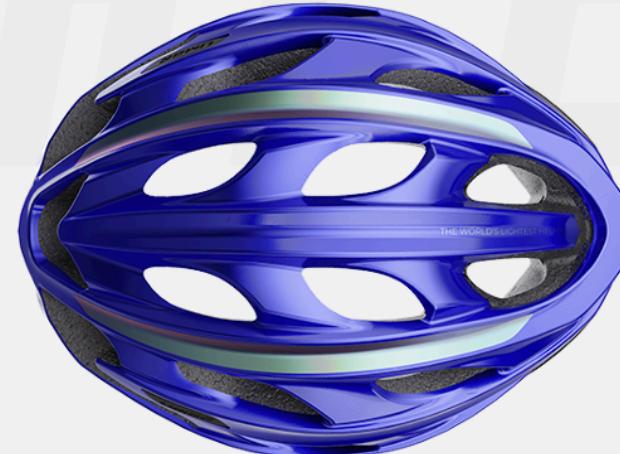

The adjustment system, Competition+, allows horizontal and vertical adjustments, and guides the strap for a perfect fitting.

The **rear red light** included is functional and useful, perfectly fitting on the adjustment system, increases safety when riding at night or in limited light conditions.

TIME TRIAL'S NEW KING

# THE TIME TRIAL'S KING

# WE WENT BEYOND WIND TUNNEL

The collaboration with the pro has always been part of LIMAR DNA, and LIMAR was the first company to sponsor a full cycling team. The recommendations of champions testing the helmets during races, allowed to develop helmets based on the real needs of professional cyclists, extremely demanding in terms of comfort, ventilation and, most of all, performance.

# AIR KING

## TIME TRIAL'S KING

The tests carried out in the Magny- Cours wind tunnel and, recently, in Boardman Performance Center allowed to translate all collected data into a shape, the shell, literally shaped by the wind.

The air flows freely around the helmet design, meeting no obstacles. The entry is through the three central openings and the sliding is guided by specific channels.

## INTEGRATED VISOR

Every detail of Air King is designed to meet high requests of the most demanding cyclists and hardest competitions.

The polycarbonate visor fits perfectly into the helmet design.

## INSTANTANEOUS MAGNETIC GRIP VISOR

## ANTI FOG AIR FLOW SYSTEM

Between the lens and the frame,

Air Flow System guarantees a constant and perfect visibility and an ideal ventilation, reducing the formation of condensation and fogging.

# EVERY DETAIL MATTERS

Our helmets are high-performance, ventilated, comfortable, protective and aero.

But our search never stops, since every little detail must contribute to boost comfort and performance. That is why we continuously look for innovative solutions, for our pro and amateur cyclists helmets.

To be able to offer just the best.

We have exploited the unique properties of carbon, coupling them with EPS, to realize a maximum resistance core with minimum thickness. Two structural wings merge with the side ribs of the shell, creating a highly performing cage in terms of safety, aerodynamics and ventilation.

# AIR PRO

## IMPROVING AIR CIRCULATION

The transversal wings, thanks to the use of carbon, have a reduced thickness. This allows easy inflow and improved air circulation inside the shell resulting in great benefits to aerodynamics and ventilation.

## SMOOTHING THE AIR

The pyramidal surface of the longitudinal ribs reduces the impact pressure, cutting the air and allowing a smooth sliding.

## PREVENTING VORTEX

The extended tail to the Air Pro decreases the resistance to the air allowing a gradual detachment and preventing turbulence.

<b>PRICE</b>	259,95 €

**Mips**

**MIPS AIR** is a Brain Protection System made by a low friction layer that allows a sliding movement of 10-15 mm, in all directions, reducing rotational motion to the brain during impact.

Limar chose the revolutionary and innovative Mips Air solution, much lighter and more ventilated than the common one.

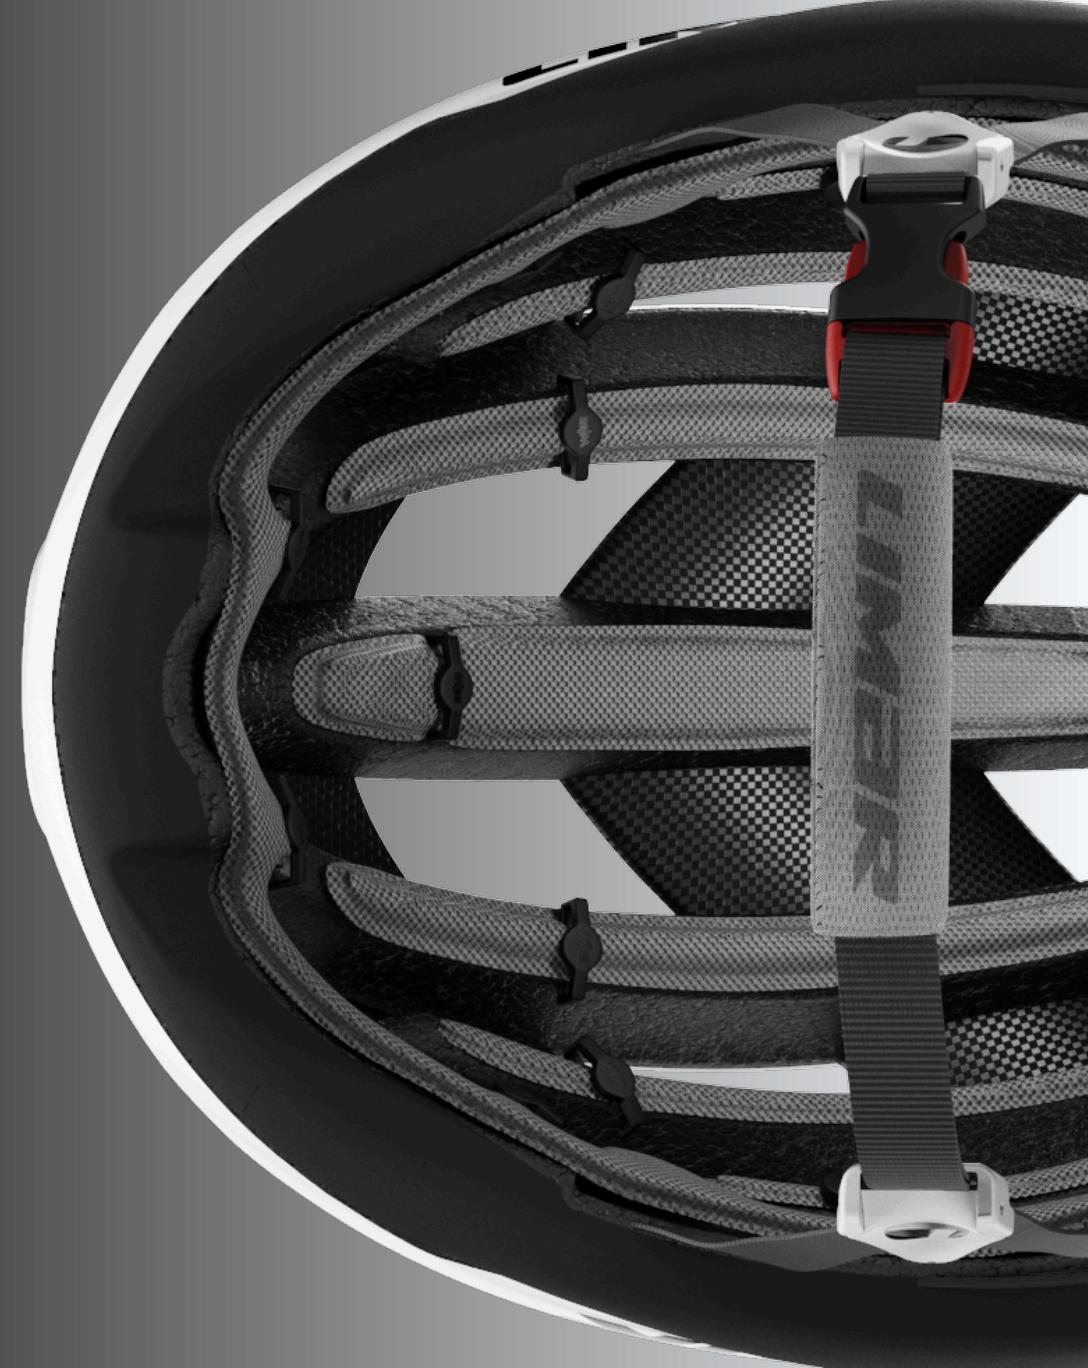

This is achieved through the integration of the Mips Brain Protection System and the LIMAR comfort padding, the result is enhanced comfort, fit and great air flow inside the helmet.

# THE ANSWER IS THE WIND

When cycling, air is your main rival.

That's why our R&D focused on the helmet aerodynamics, studying the air stream and turbulence to guarantee athletes and amateurs a real and consistent advantage.

At an average speed of 40 km/h, AIR SPEED achieves the same performance and aerodynamics code than our time trial helmet, LIMAR AIR KING, with the natural advantage of a better ventilation.

IDEAL FOR AERO AND VENTILATED RIDES

### VENTILATION

AERODYNAMICS

VENTILATION

LIGHTNESS

It might sound like a contradiction but it is a reality made possible by Limar tech.

By exploiting the Venturi effect, the 15 air vents and their channel circuit allow the entry of a large quantity of air without compromising the aerodynamic performance.

# AIR MASTER

## DEVELOPED IN THE WIND TUNNEL

Limar's 30-year experience in designing and producing ever more advanced and performing models are all there to be seen. Through extensive tests in the Magny-Cours wind tunnel, we have worked on every single detail, to achieve the best possible balance between aerodynamics and ventilation. The result is a helmet with performance and comfort never seen before.

## ULTRA VENTILATED

Thanks to the Venturi effect, the fifteen air vents and the internal duct, the helmet grants the entry of a large amount of air, but with no compromise with its aerodynamic performance. Comfort is ensured by the circulation inside the helmet, where the air is channeled through the entire shell, and the accumulated heat is expelled, keeping the head cool.

## THE SECRET IS SMOOTHNESS

Thanks to the position of the front air vents and to the shape of the rear section, the air has a lesser impact, it runs along the entire shell and detaches progressively, without creating turbulence.

<b>PRICE</b>	159,95 €

# DESIGN IS NOT SIMPLY ABOUT IMAGE

Design means creating a helmet providing comfort, ventilation and performance within an inspiring shape. The most innovative analysis tools (CFD) guided us in designing each product as a perfect synthesis between form and performance.

At the centre of every design phase there is always the rider, the one who must wear a helmet and feel really good wearing it: a design that does not respect this crucial requirement fails from the beginning.

# CAOS

NEW

ONE PASSION, TWO SHIELD LENSES

The new CAOS - aggressive design with a solid, noticeable frame.

It's the perfect style for gravel and enduro lovers.

It offers an extra wide-vision monoshield, with cylindric, high resistance polycarbonate lens for full protection from sun, sand and other debris.

Completed with big rubber nose pad for great adherence and adjustable temples for perfect fit.

CAOS is a model with **interchangeable lenses**. It is equipped with a 100% UV protective lens up to 400nm, with anti-scratch treatment and dark mirrored finish (cat.3), and 1 clear lens for use in low visibility situations.

#### RESISTANT STRUCTURE PLEASANT TO TOUCH

The frame material Grilamid TR90, is a composite more elastic than standard polycarbonate, highly performing and resistant to breakage.

TR90 is coupled (by double injection) with a soft touch rubber, to allow a perfect adherence and avoid sliding during sports activities.

Nose pad with triple injection rubber, without any metallic part to avoid discomfort in contact with the skin.

**PRICE** 99,95 €

**FRAME** Grilamid TR90 full frame. High adherence nose pad, djustable and temples tips

**LENS** Polycarbonate 100% UV400, cat 3 (15% transmittance) flash mirror and revo coating

**DETAILS** Anti fog air flow system, changeable lens system

**ACCESSORIES** Clear cat.0 changeable lens, hard case and cleaning cloth included

**IDEAL FOR** Gravel and Enduro lovers

# ATHEROS

ENHANCE YOUR VISION

NEW

The unique design of this frameless model allows you a wide vision perfect for long rides thanks to its lightweight. Sportive but still polished, it's suitable for all cycling disciplines, especially racing.

The one piece shield broadly covers the entire eye area for total protection from the sun and any obstacle. It also prevents light from disturbing the eyes from the side, improves aerodynamics by sliding the wind without creating turbulence. The minimum weight is evenly distributed between the ears and the nose. The super-light temples are made of elastic composite material and highly resistant to breakage (Grilamid TR90), while the nose and the tips are made of triple injection rubber without any metal parts that could cause problems in contact with the skin.

ATHEROS is equipped with single protective lens in high resistance polycarbonate, with anti-scratch treatment and several colours according to versions.

<b>PRICE</b>	89,95 €
<b>FRAME</b>	Temples in Grilamid TR90, coupled to soft tough rubber on temple tips

# DELTA

WHEN THE GOING  
GETS TOUGH

A dynamic photograph of a mountain biker in a forest. The biker is leaning into a turn, with their front wheel lifted off the ground, kicking up a cloud of dust. They are wearing a white and black jersey with a forest graphic, black pants, and a black helmet. The background is filled with tall, thin trees and sunlight filtering through the canopy.

**WHEN  
THE GOING  
GETS TOUGH**

# DELTA

## WHEN THE GOING GETS TOUGH

DELTA is developed with Triple shell PC / EPS in-mould technology.

With its extended temples and neck coverage, it complies with the strictest International Safety standards CE, CPSC, AS and also with the NTA 8776 for E-Bike. The new LIMAR DELTA HELMET offers a perfect fit for any head, it is available in two sizes M (53-57) and L (57-62).

## TOTAL PROTECTION

It is equipped with a large peak to protect from sun, branches and stones, adjustable in three positions, it allows to place comfortably your goggle when not in use.

## LIGHTNESS, VENTILATION AND COMFORT

Thanks to Limar high technology, choice of materials and know-how in terms of lightness, the weight is among the lowest in the same category in the market (310gr for M size).

It offers an excellent ventilation thanks to its 17 vents and two internal flow channels for a perfect air circulation.
